

Center for Computational Neuroscience

Flatiron Institute, Simons Foundation

Eero Simoncelli

Scientific Director

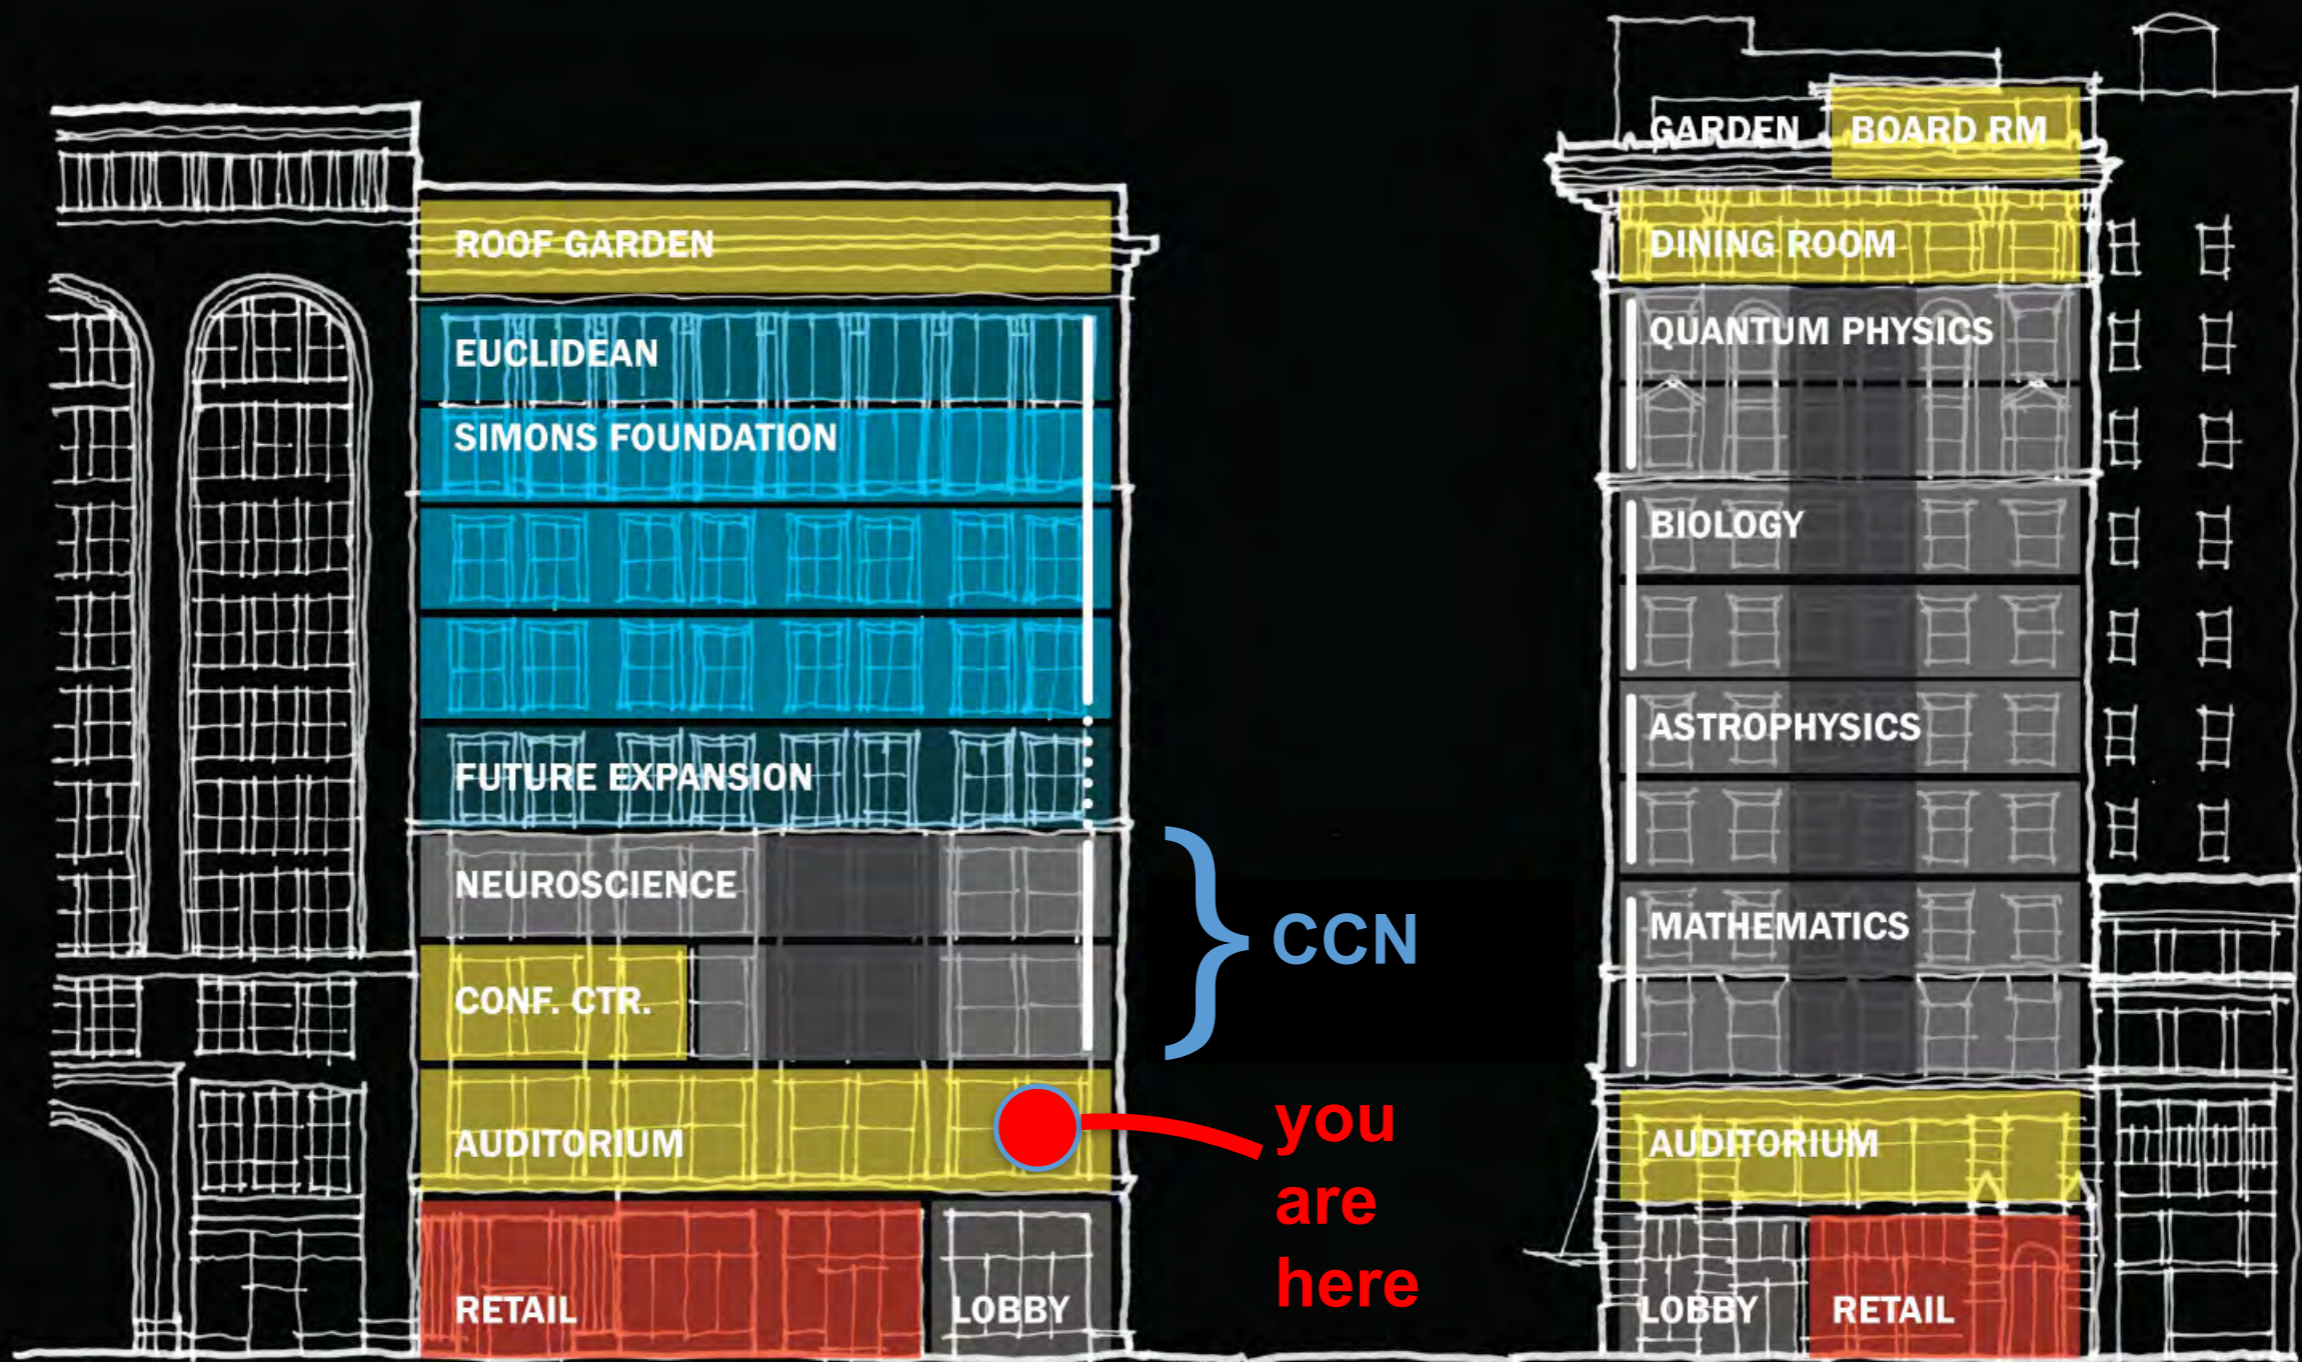

Simons Foundation - co-founded by Jim and Marilyn Simons in 1994, to support research in mathematics and basic sciences.

Flatiron Institute - internal research division, focused on advancing specific branches of science through computational methods.

Center(s) for Computational ...

162 5th Ave

Scale/Abstraction

[Figure modified from original of T. Sejnowski]

Neuroscience Research: Levels of Abstraction

Principles of neural computation:
adaptive transformation/representation
persistence/storage
inference/prediction/action

Models (math, architectures)
to instantiate these principles

Tools (algorithms, software)
to simulate, fit, and test these models

CCN Research Groups

Neural Circuits & Algorithms (Mitya Chklovskii)

Computational Vision (Eero Simoncelli)

NeuroAI and Geometric Data Analysis (SueYeon Chung)

Statistical Analysis of Neural Data (Alex Williams)

Data Science Team (NeuroRSE)

Edoardo Balzani • William Broderick • Sarah Jo Venditto • Guillaume Viejo

Goals

- Development, maintenance, dissemination of software tools for neural data analysis, modeling, and experimental design
- Standard/mature methods (*not* specialized/cutting-edge)
- Training/collaboration workshops for developers, and users
- Long-term commitment to maintenance/development

Pynapple (Python Neural Analysis Package)

NeMos (Neural Models)

Plenoptic (Model-based experimental stimulus design)
